

Project features list

- Game functionality
 - 2048 and Tetris will be played simultaneously. This will involve two windows taking in user arrow key inputs that move the individual game pieces. It's great.
- Login system
 - Storage of password / username so you can login and instantly do entry into the leaderboard system.
- Leaderboard system
 - Keep the top 3 scores of every account and display them in a leaderboard tab.
- Tutorial
 - Simple thing that teaches how to play the game. Highlights key binds and how they affect each side of the game.
- Settings
 - Change themes (incl dark mode).
 - Account management.

Requirements

Done in [Jira](#) by Ryan and Kevin.
